Education

Indian Institute of Technology (Indian School of Mines), Dhanbad

Bachelor of Technology in Mechanical Engineering (GPA: 6.87 / 10.00)

Expected May 2028

Dhanbad, Jharkhand

- **Relevant Coursework:** C Programming, Digital Electronics

Sant Kabir Inter College Chachaipar Mau, UP

Senior Secondary Education (Marks: 464/500), Uttar Pradesh Board

April 2024

Sant Kabir Inter College Chachaipar Mau, UP

Secondary Education (Marks: 559/600), Uttar Pradesh Board

April 2022

Projects

FutureMe | [Next.js 14](#), [Node.js](#), [Express.js](#), [PostgreSQL](#), [Stripe](#), [JWT](#) | [Live Demo](#) | [GitHub](#)

- Built a full-stack delayed letter delivery app — users write encrypted letters today, delivered via email on a chosen future date (6 months to 30 years)
- Implemented AES-256-GCM encryption for all letter content with per-user derived keys and bcrypt password hashing
- Integrated real Stripe Checkout with webhook signature verification for a secure credit-based payment system
- Designed a cron scheduler with retry logic (up to 3 attempts) for automated email delivery via Nodemailer
- Migrated from SQLite to PostgreSQL (Neon), converting all routes to async/await with parameterized queries
- Secured REST API with Helmet.js, CORS, rate limiting, JWT auth, and admin role-based access control

StockPulse | [React](#), [Node.js](#), [Express.js](#), [PostgreSQL](#), [Sequelize](#) | [GitHub](#)

- Designed and implemented the core stock movement engine using Sequelize transactions, ensuring atomic updates across stock table and ledger with full rollback on failure
- Built an immutable stock ledger tracking quantity deltas and running balances per operation — modeled after real ERP audit patterns
- Architected a state machine lifecycle (draft → waiting → ready → done) ensuring stock mutations only trigger on validated documents
- Developed a real-time dashboard with KPI cards, 30-day movement trend charts, low-stock alerts, and per-warehouse stock breakdowns

Focus Garden | [HTML](#), [CSS](#), [JavaScript](#) | [Live Demo](#) | [GitHub](#)

- Built a Forest-inspired focus timer app with Vanilla JS, HTML5, and CSS3 — zero frameworks, zero dependencies
- Implemented behavioral commitment mechanics (no-pause sessions, tab-switch detection, violation tracking) to prevent fake productivity
- Built client-side analytics including GitHub-style monthly heatmap, weekly bar chart, daily streaks, and peak-hour insights — all computed from `localStorage`
- Engineered a class-based `FocusTimer` using `Date.now()` drift correction for accurate countdowns over long sessions

Technical Skills

Languages: Python, C, C++, JavaScript, TypeScript

Technologies: HTML, CSS, React, Next.js, Node.js, Express.js, PostgreSQL, REST APIs

Tools & Platforms: Git, GitHub, VS Code, Stripe, Nodemailer, Railway, Vercel, Neon

Concepts: JWT Authentication, AES-256-GCM Encryption, Cron Scheduling, Webhook Verification, CORS, Rate Limiting
